A General Note: Piecewise Functions. A piecewise function is a function in which more than one formula is used to define the output. Each formula has its own domain, and the domain of the function is the union of all these smaller domains.

### 3.3 Piecewise Functlons - Pre-Calculus

Functions assign outputs to inputs. Some functions have simple rules, like "for every  $x$ , return  $x^2$ ." However, there can be other rules that are more elaborate. For example, "If  $x < 0$ , return  $2x$ , and if  $x \geq 0$ , return  $3x$ ." These are called \*piecewise functions\*, because their rules aren't uniform, but consist of multiple pieces. A piecewise function is a function built from pieces of different ...
