Sequences and series (Algebra 2) - Mathplanet

So, an arithmetic series is in the general form: first term, $a_1 + a_2 + a_3$, and on and on until the last term, a_n . This is a finite arithmetic series, because there is a specific endpoint; there is a finite number of terms. As with arithmetic sequences (those could be finite or infinite), you could have finite or infinite ...

Arithmetic Series Date Period - Kuta
2,4,6,8,10...is an arithmetic sequence with the common difference 2. If the first term of an arithmetic sequence is a_1 and the common difference is d , then the n th term of the sequence is given by: $a_n = a_1 + (n - 1)d$. An arithmetic series is the sum of an arithmetic sequence. We find the sum by adding the first, a_1 and last term, a_n , divide by 2 in order to get the mean of the two values and then multiply by the number of values, n :

Arithmetic Sequences and Series | Algebra 2 | Sequences ...

And we actually have a formula for the sum of an arithmetic sequence. And how it works is s of n , so this is the sum of the first n terms in this series is equal to n over 2. So that's the number of terms and then it's the s of 1 the first term plus s of n being the last term.
