Microtracer AMS: Accelerate your clinical development | TNO and requires extremely precise analysis technique. It is interesting for an oil explorer because of its direct approach. The geochemical methods generally used are:- a) Micro gas survey: These surveys are prominently carried out in Russia and adjoining countries. Method: The area under investigation is divided into profiles.

Analytical Methods. The table below presents suggested analytical methods for the characterization of petroleum releases. When designing an analytical plan, the environmental professional should consider the substances which may be present based on the site history and select the appropriate analytical methods to detect and characterize a release.

Exploration & Production (E&P)

Geophysical exploration including seismic analysis is the primary method of exploring for petroleum. Gravity and magnetic field methods are also historically reliable evaluation methods carrying over into more complex and challenging exploration environments, such as sub-salt structures and deep water. Beginning with GIS, gravity, magnetic, and ...

TNO has the unique ability to fully automate blood, plasma, urine or fecal sample analysis by AMS, based on auto-combustion. This differs significantly from the standard gravitization-based approach. Auto-combustion sample preparation allows us to analyse more samples per day, ensures a faster turnover time, and is more economical because it is ...

Methods of Exploration and Production of Petroleum Resources
SBL is a marine electromagnetic method that has the ability to map the subsurface resistivity remotely from the seafloor. The basis of SBL is the use of a mobile horizontal electric dipole (HED) source transmitting a low frequency electromagnetic signal and an array of seafloor electric field receivers.

Exploration is responsible for handling the risk intrinsic in this activity, and this is generally achieved by selection of a range of options in probabilistic and economic terms. Indeed, exploration is a risk activity and the management of exploration assets and associated operations is a major task for oil companies.
