Excimer Laser Technology - Advanced Eye Care Center, P.A.

LASIK corneal flaps could now be made with a precision-guided laser instead of a blade. LASIK just got safer and more predictable. 2010 - The WaveLight® EX500 Excimer Laser system is launched integrating the excimer laser, wavefront technology, and femtosecond lasers into one system.

At Tidewater Eye Centers we use the VISX STAR S4 IR® excimer laser system to correct nearsightedness, farsightedness and astigmatism. We take time to fully explain how this technology works and why it is considered one of the most advanced laser technology platforms on the market today. Here is a general overview of the benefits:

With phenomenal advances made in equipment technology in the last two decades, and today microelectronic devices fabricated using excimer laser lithography totaling \$400 billion in annual production, it is the semiconductor industry view that excimer laser lithography has been a crucial factor in the continued advance of Moore's law, enabling minimum features sizes in chip manufacturing to shrink from 800 nanometers in 1990 to 7 nanometers in 2018.

And over the decades, advances in excimer laser technology have increased the safety, efficacy and predictability of corneal refractive surgery. Excimer lasers have the ability to remove, or "ablate," microscopic amounts of tissue from the cornea with a very high degree of accuracy and without damaging the surrounding corneal tissue.

Nidek Advanced Vision Excimer Laser System The EC-5000 Quest is one of the most reliable excimer lasers on the market today. The ergonomic EC-5000 Quest is designed to reduce or eliminate myopia and hyperopia, with or without astigmatism, and offers the latest in advanced technology — all without per-procedure fees.

Excimer laser - Wikipedia

The Wavelight EX500 used at Kleiman Evangelista Eye Centers of Texas is an excimer laser. These types of lasers have completely revolutionized the field of laser eye surgery. The excimer laser is used in Blade-Free LASIK during the second step of the procedure - changing the cornea shape to correct vision. Over the decades, the excimer laser ...

LASIK lasers: Which excimer laser is best? - All About Vision

Deep- ultraviolet (UV) lithography represents a highly specialized application of excimer lasers, a primary light source for imaging VLSI reticle patterns onto photoresist-coated silicon wafers for advanced integrated circuit (IC) fabrication. The excimer laser is integrated in a high resolution optical projection aligner, the wafer stepper.

Now in its second decade of use, the technologically advanced Excimer laser has added a tremendous amount of precision, control and safety to treating nearsightedness, farsightedness and astigmatism. Its ability to remove corneal tissue with accuracy up to 0.25 microns (0.00004 of an inch) with each pulse makes the Excimer laser so well suited ...

VISX STAR S4 with IR Excimer Laser - Tidewater Eye

Researchers found that IBM's new Excimer laser, used initially for etching computer chips, had medical applications as well. Now in its second decade of use, the technologically advanced Excimer laser has added a tremendous amount of precision, control and safety to treating nearsightedness, farsightedness and astigmatism.

Advanced Excimer Lasers. Lasik improves vision ultimately by changing the shape of the cornea. The excimer laser is the device that is responsible for making that change in the shape of the cornea in order to provide the eye with a proper focus. Like most modern technologies, excimer lasers have seen significant improvements through the past 20 years.
